

**Yuck! Buckets of wipes collected at the Waterford Wastewater Treatment Plant.**

**Flushable wipes are not biodegradable. They can damage plant equipment at the Waterford Wastewater Treatment Plant. Plant operators must manually rake the wipes out of incoming sewage at least twice a day to keep the system working.**

*You* can help avoid expensive equipment breakdowns!

The sewer can handle 3 Ps:  
Pee, Poop,  
Toilet paper

Wipes are like cloth  
- they do not break  
down like paper  
does.

Put used  
wipes in the  
trash, not in  
the toilet!
